

App Review Insights Analyser

Product: Groww (Indian Investment & Stock Trading App)

Platform: Google Play Store

Review Period: Dec 2025 – Feb 2026 (8–12 weeks)

Groww Review Pulse Sample — Week of 2026-02-18

Reviews Analysed: 67 | **Period:** 2025-12-18 → 2026-02-15 | **Source:** Google Play Store

Top 3 Themes

#1 · Performance & Technical Bugs — 45% of reviews (30 / 67)

“App crashes every time I try to check my portfolio.” ★ 1-star · 2026-02-12

Crashes and slow loading are the single loudest signal this week.

⚡ **Action Idea:** Launch a crash-free sprint — instrument the top three crash traces and ship a stability-focused patch before the next release cycle.

#2 · Onboarding & UX Confusion — 28% of reviews (19 / 67)

“Login process is confusing AF. Took me 20 mins to get in.” ★ 3-star · 2026-02-05

New users are hitting friction before they place their first trade.

⚡ **Action Idea:** Redesign the login flow with a step-indicator and reduce required taps by 40% — measure drop-off at each authentication step.

#3 · Trust & Security Concerns — 18% of reviews (12 / 67)

“KYC verification stuck for 3 days. Support not responding.” ★ 2-star · 2026-02-09

Verification delays are eroding confidence in a money-handling app.

⚡ **Action Idea:** Add a KYC status-tracker with real-time updates and a 24-hour SLA commitment — turn a pain point into a trust signal.

Laugh. Learn. Iterate. 🚀 | Word count: 172 / 250

2 Email

PDF

How the email is sent: The n8n workflow's **Send Email** node delivers this as a styled HTML email via Gmail OAuth2. The subject line auto-includes the current week date for easy inbox archiving.

3 Reviews CSV (Redacted Sample — 20 rows)

No usernames, emails, or account IDs. Only: rating, title, text, date.

CSV

Redaction applied by `scripts/redact_pii.py`: strips any usernames, emails, phone numbers, and reviewer IDs before the CSV enters the n8n pipeline.

4 How to Re-run & Theme Legend

How to Re-run for a New Week

One-time setup (~20 min): Import `n8n_configs/workflow.json` into n8n Cloud, add your Groq API key, and connect Gmail OAuth2.

Each weekly run (~2 min):

Option A — Quick demo (no CSV needed)

1. Open n8n → Groww Review Analyzer workflow
2. Click “Upload CSV (Manual Trigger)” → “Test step”
3. Open the form URL in your browser
4. Select “Use sample Groww data” → Submit
5. Wait ~90 seconds → check your inbox

Option B — Fresh Play Store data

- 1. python scripts/scrape_reviews.py # fetches latest reviews
- 2. python scripts/redact_pii.py # strips PII → reviews_clean.csv
- 3. Open n8n → Groww Review Analyzer workflow
- 4. Click “Upload CSV (Manual Trigger)” → “Test step”
- 5. Open the form URL → select “Upload custom CSV” → upload reviews_clean.csv
- 6. Submit → wait ~90 seconds → check inbox

Theme Legend

Reviews are classified into exactly **one of 5 fixed themes** using Groq AI (primary) → keyword scoring (fallback).

#	Theme	Emoji	Signal keywords
1	Onboarding & UX Confusion	🧭	login, signup, confusing, navigate, find, UI
2	Performance & Technical Bugs	🐛	crash, slow, loading, error, freeze, bug
3	Missing Features & Requests	💡	wish, need, add, missing, feature, should have
4	Trust & Security Concerns	🔒	money, account, security, kyc, blocked, verification
5	Support & Communication	📞	support, customer service, help, response, resolve

The **top 3 themes by review volume** appear in each weekly report.

5 System Architecture (Summary)

Architecture

Tools used

- n8n Cloud — workflow automation (no-code/low-code)
- Groq AI (llama-3.1-8b-instant) — theme classification & summarisation

- Python 3 — review scraping + PII redaction
- Gmail OAuth2 — email delivery
